

TELL US!

How can we improve behavioral health and disability services in your community?

Vaya Health is conducting a survey in January 2017 to find out what people living in 23 western North Carolina counties think about the availability of services for mental health needs, substance use issues and intellectual or developmental disabilities in their local communities.

Our **Community Needs Assessment Survey** gives you the opportunity to tell us what services are needed locally and share other information that is important to you. The 2017 survey is available from Monday, January 16, through Friday, January 27.

Access the survey online using the link to the left that best applies to you. Thank you for helping us improve healthcare services throughout western North Carolina!
